

What we offer

AirMedia creates and broadcasts live radio, television and SlideShow channels by satellite.

With our extensive experience in radio, television and multimedia, we help you develop your concept and adjust to your requirements to ensure you get exactly what you need.

Satellite Radio and Television

Inform, educate, and entertain staff, customers and your target market easily and effectively with your very own communication channel, customised to your specific needs.

Satellite SlideShow

SlideShow is a scaled-down version of television. Instead of running at a full frame rate, SlideShow runs at one frame of video every 8 seconds. This opens up a new world of media possibilities, allowing you to market your products or services using poster-style adverts.

Audio and video edit suites

Our own production facilities include video editing and compositing applications Avid, Final Cut Pro HD, and Motion. Our professional industry-standard audio suite includes a sound booth for voice-overs, as well as over 10,000 effects titles, MIDI inputs and CD/DVD master authoring.

Our trained operators and staff have a combined experience of more than 50 years in the radio, television and broadcast industries.

Creating from scratch

Adverts, IDs, stings and other unique content is generated by us from a brief, or by using almost any of your printed material (like a club magazine). A 30-second advert no longer needs to be a big production, and can now be quickly and professionally created by us in co-operation with you or your agency.

Broadcast studios

Once your content has been created, edited and , it's delivered for broadcast to one of our radio or television studios dedicated to your channel. From this studio, a DJ or VJ (video jockey) entertains your target audience and incorporates the content according to a unique playlist.
